

## Student Daily Self-Screening Questions

To help protect all members of our Kish campus community, anyone entering the campus needs to perform a daily self-screening prior to coming to campus. **Please ask yourself the following questions:**

- Do I have a cough, not associated with allergies or other known medical conditions?
- Do I have a fever greater than 100.4 degrees Fahrenheit?
- Do I have chills?
- Do I have an unusual, persistent headache?
- Do I have shortness of breath or difficulty breathing, not associated with other known medical conditions?
- Have I lost my sense of taste or smell?
- Do I have any new respiratory problems (e.g., wheezing, congestion)?
- Do I have fatigue, muscle or body aches?
- Do I have nausea, vomiting or diarrhea?

If you can answer “yes” to any of the above questions, you should not come to campus and notify your healthcare provider.

**Students should not return to campus until** all of these criteria are met:

- At least ten days have passed since your COVID-19 symptoms first appeared.
- You have had no fever for at least 24 hours (without fever-reducing medication)
- Your other COVID-19 symptoms have improved

### Other Considerations:

Those caring for a sick person should quarantine for 14 days after the patient has been fever-free and their symptoms are improving.

If you have had any close contact with someone with lab-confirmed or presumptive lab-confirmed COVID-19, you should contact your local health care provider and fill out report for exposure form at [www.kish.edu/filingareport](http://www.kish.edu/filingareport)

**REMINDER:** If you have been diagnosed with COVID-19, you must fill out the report for individual with COVID-19 at [www.kish.edu/filingareport](http://www.kish.edu/filingareport).
